

A.R.T.E.M.I.S. Interview

Interviewee: _____ Role: _____ Date: _____ Interviewer: Hashir Rauf

Q1. The Last Time You Lost Your Place

Tell me about the last time you came back to a project after some time away and struggled to remember what you were doing or what to do next. Walk me through what actually happened.

Probe if needed: What did you do to get back up to speed? How long did it take? Did it cost you anything real (time, a deadline, quality of work)?

Q2. The Workaround You Already Have

What's a manual, repetitive part of your workflow - organizing files, pulling notes together, writing the same kind of message - that you've never gotten around to automating or fixing? Why not?

Probe if needed: Have you tried a tool for this before and abandoned it? What would it have taken for you to actually switch to something new?

Q3. Reacting to the Concept

ARTEMIS: a desktop assistant scoped to folders you explicitly add ("workspaces"). It can resume interrupted work, tidy files, synthesize notes, catch repeated tasks, explain/fix code, search the web on demand, draft emails, and draft documents - but every file-changing or outbound action is shown for approval first, and can be undone.

Here's an idea we're testing: an assistant you only give access to specific folders, that shows you every action before it happens - file changes, emails, anything - and lets you undo afterward. What's your gut reaction to that, positive or negative?

Probe if needed: Does the approval step sound reassuring or like it would get in the way? Would you actually read each approval, or start clicking through them without looking?

Q4. The Trust-Breaking Moment

Imagine it's been working well for two weeks, then it makes one mistake - say it drafts an email with something wrong in it, or organizes your files in a way that loses something. What happens next for you? Do you keep using it?

Probe if needed: Would it matter which feature made the mistake? Is there a feature where a mistake would be unforgivable versus one where you'd shrug it off?

Q5. Would You Actually Keep Using It

Realistically, if this existed today exactly as described, would you install it? And a week later, would you still be opening it - or would it quietly fall out of your routine? What's the honest answer?

Probe if needed: If you'd stop using it, what's the single most likely reason? If you'd keep using it, what would it have to keep proving to you?

Interviewer notes: Let silences sit - don't fill gaps with suggestions. If an answer stays abstract, ask for one concrete, recent example before moving on. Capture direct quotes where possible; they're more useful in the report than paraphrases.
