

Service asks for “notes/chapter3.md” (workspace-relative, always)

WORKSPACE BROKER

1. resolve against the active grant root
- 2. canonicalise (realpath, resolving symlinks)**
3. assert the canonical path is under the grant root
4. assert not in the deny-list (system, hidden, credential paths)
5. assert the operation is within the granted permission

any assertion fails → raise, log, do not act

*canonicalising
before the bounds
check is what stops
traversal escapes*

a real path, or a refusal
